

TnAC Access Control File Formats

Introduction

This document describes the format of the interface files used by TnAC, the native Access Control module of SecuTix.

Files are CSV, semi-colon separated, without header.

WhiteList

barcode;season_code;product_code;category_id;reduced_price;is_specimen;validity_date;tag;entranceBarcodeId

- mandatory
 - barcode, season_code, product_code
- optional
 - all others
- reduced_price, is_specimen: TRUE or FALSE
- validity_date: empty or yyyy-mm-dd hh:mm:ss
- tag: empty or String
- category_id: 0 (always)
- entranceBarcodeId: empty or ID (is using Marketplace with EntranceID)

BlackList

barcode;reason;season_code;product_code;blacklist_date

- mandatory
 - all
- reason:
 - CANCELLED
 - TECHNICAL
 - STOLEN
 - blacklist_date: yyyy-mm-dd hh:mm:ss (can be empty)

Below are deprecated files.

Definition file

- first row
 - season_id;season_name;season_code
- then
 - product_id;product_name;product_code

Checked Barcodes file

- first row
 - organizer_code;;product_code;
 - field 2 = season (empty)
 - field 4 = representation (empty)
- then

- barcode; date;
- date format is yyyy-MM-dd'T'HH:mm:ss

Example:

ORG;;5012;
24282035061813972260;2008-04-03T08:00:00
