1. Definition and types

In SECUTIX a Season Ticket is as "Composed product".

It is defined as a contract between the organization and its customers, which offers seats for a purchase at reduced rates in return for a commitment to attend a certain number of events (all, or a subset).

Button  allows to create a new season ticket: according to your license, there are 3 types:

☆ *Choose the price type*

Season ticket price type *

☐ Calculated price
☐ Predefined
☐ Championship season ticket

Competition

NB: once chosen, the price type cannot be modified

Calculated price

The customer needs to choose their tickets at the time of ordering the season ticket. The price is the sum of the prices of the tickets, using a specific season ticket tariff.

Predefined/Fixed-price

For a predefined amount, the purchaser has the right to choose at most N performances.

The customers pay upfront one overall price, which entitles them to a fixed number of seats that they can choose for themselves. Subscribers can choose seats after purchasing the season ticket, without exceeding the permitted number of seats.

Italian Certification | Specific behaviour

For Italian clients using a Certified S-360 license only this type of season ticket will be available. Moreover, due to the fiscal requirements, some features described below might be inhibited or hidden (like "multi-season", "Ticket printing mode", etc)

Championship

Season tickets of this kind give the right to attend to all matches of a given championship.

It is a special type of fixed-price season ticket that does not allow the customer to choose: once purchased, it cannot be modified but offers access to every match in a championship of a given sport club

There's also a flexible championship season ticket that works like the standard fixed price (with a selection of events to attend). More info here: [Flexible Fixed Price Season card](#).

When selected it requires to specify the competition. See [Organization](#) | [Catalog](#) | [Competition](#)

NEW Fixed seat season ticket

This season tickets is thought to meet some specific needs for German and Austrian markets. See more details [here](#).

2.Create a new season ticket: basic settings

Tax VAT: VAT rate that will be used for your season ticket. To be selected among the drop down elements. It cannot be changed afterwards.
See : [Institution](#) | [Initialization](#) | [VAT Rates](#)

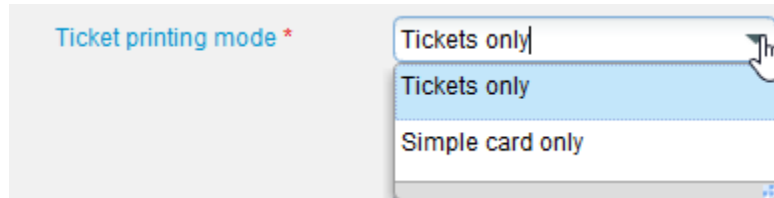

Product types: it is possible to choose among the values created in [Organization](#) | [Initialization](#) | [Product Types](#)

Alert ratio (%): Threshold of remaining availability from which the season ticket will be considered as with "limited availability".
This will trigger the availability color used on the ticketshop (it will become orange as soon as the level is reached) and display the Alert Quota message in the back office.

STATE	FIRST PERFORMANCE DATE	LAST PERFORMANCE DATE	NUMBER OF PERFORMANCES	GROUPING
Running	05/01/2020	30/01/2020	3	QUOTA ALERT

Seat category mapping: allows to select among the values defined in [Organization](#) | [Venue](#) | [Mapping tables](#)

Ticket printing mode: it is required to choose among two options: 1) Ticket only, to skip the printing of the season ticket itself (no card), 2) Simple card only, to avoid the printing of tickets;

Ticket model: Ticket model that will be used for the season ticket (Simple card type / e-simple card only)
When Ticket printing mode is set to "Tickets only", the system will use the ticket models of the events

Producer / Promoter / Partner: useful when using the producer portal. Producer contact (structure of type producer) can be linked to the product.
This contact will be able to access data related to this product in his producer portal.

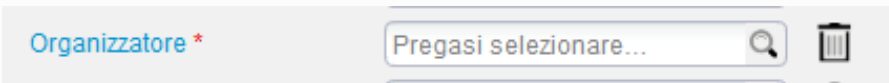

Additional Producer / Promoter / Partner: useful when using the producer portal.
Additional producer contact (structure of type producer) can be linked to the product. This contact will be able to access data related to this product in his producer portal.

Invoice Producer / Promoter / Partner: useful when using the producer portal. This producer contact will be invoiced for the product.
The contact set in this field has no access to the producer data in the portal but can be the same as defined in the producer fields. Needs to be define even if the producer has been set.

Italian Certification | Specific behaviour

 Italian clients using a Certified S-360 license will also have to define: 

- "Organizzatore": a structure contact that must have both an Italian address and VAT/"Codice fiscale". Name and VAT are included in ticket template and C1 reports.

Merchant Id: in case of split payment (installments), configuration of the merchant ID (instead of having it inherited from ePC)

SHA Key: related to the merchant ID, hash key to finalize the setup of the merchant ID

Logo: (max size 1 Mb) image that will be used to illustrate the product. This image will appear on the landing page and on different pages of the ticket shop.
Depending on the setup of your landing page, you may want to pay attention to the ratio or to where you position the main element in your image. More info on [A dynamic shop window](#)

Internet description URL: link to an external page that will appear behind the More Information link.
This link is displayed after the Public description on the ticketshop. It aims at directing people to a page where you would usually present the event. To be used with care as it takes users out of the funnel.

Include in shipment fee: for cases where shipment fees were set to be Per ticket, you can choose if the product will be applying the shipment fees or not.
This provide the flexibility to say that some products are not eligible for shipment fees. See [Organization](#) | [Initialization](#) | [Shipment Fees](#)

Remark: text field to insert comment. This will remain at back office level.

b) General / Parameter

The following settings are shared by all types:

Price type: shows the season ticket type chosen at first stage of the creation process.

Allow subscriber quality: indicates whether the contacts become "subscriber" after purchasing this product. If yes, it will trigger Season Ticket Holder Indicator in Standard Indicators if activated.
It also means the customers will be entitled to access Subscriber Tariffs outside the season ticket.

Minimum subscription lines: is the minimum number of lines to be chosen when the season ticket is purchased

Maximum subscription lines: is the maximum number of lines allowed by the season tickets

Separate events: if set as yes, while *creating* or *editing* the season ticket, in "Line" menu you can choose the same event only once. To select the same event in more lines set is as "no".
This option can be changed later (suspending the product first)

Price level: it allows to select among the "Subscriber" Price levels predefined in Organization | Initialization | Price level. It is mandatory.

Internet cultural contact: defines if cultural contact is optional/mandatory/not required for online sales

Same seat: as well as general configuration limits the overlapping between simple tickets and season tickets sales, if set as "yes" the system will pick the same seat for all the performances selected with the first ticket.

Multi-seasons: allows to use the product across different seasons

Automatic renewal: (Sport) if yes, it requires the configuration and activation of the Season Ticket renewal batch. The related field "Number of season" will be activated in order to allow the imputation.
More info: [Automatic season ticket renewal](#)

Contingent: allows to select an existing contingent that will be considered as the *only* one available for this product.
It means that only the seats configured as such in the events' sales configurations will be selectable by the season tickets holders.

Predefined/Fixed-price and Championship

Number of authorised tickets *

Maximum number of tickets per event

Maximum number of tickets per performance

Min subscription lines *

Max subscription lines *

Number of authorized tickets: is the total number of tickets that a customer could select inside this season ticket product

Maximum number of tickets per event: defines how many tickets per event are allowed by the product

Maximum number of tickets per performance: defines how many tickets per performance are allowed by the product

Min subscription lines*: defines how many lines (events) must be chosen at the same time the season tickets is purchased. If set to 0 it means the subscriber can buy just the season tickets without using it contextually.

Max subscription lines*: defines how many lines (events) can be chosen at most

*Lines are specified in the homonym menu

Example: In the configuration shown above the product allows max. 6 tickets, to be used for no more than 4 events (among which 2 must be chosen straightaway at the box office).

Since there's a max limit per event and performance equal = 2, the customer can use the season ticket in several combinations, like:

- i) 1 tickets for 2 different events + 2 tickets for the same performance of 2 other different events
- ii) 1 tickets for 2 different events + 2 tickets for two separated performances of 2 other different events
- iii) 2 tickets for the same performance of 3 different events
- etc etc

Events
Concert
Cats
☐ Mandatory ☒ Optional
☒ Inherit from season ticket ☐ Yes ☐ No
One performance

In order add () the events the following screen requires the selection of the Activity first and the Grouping (if configured).

Choice: if Optional, the subscriber have the possibility to choose the given event, picking among the available dates defined by "Performance selection".

if Mandatory, the customer must select the event as defined by "Performance selection".

NB: this setting must be consistent with the basic limits defined in *General | Parameter* and *Groupings* (when used), otherwise the season ticket might not work as expected or at all.

Allow seat category upgrade/downgrade (used for online sales only): only available in Calculated price Season Ticket, if you have a category season ticket it allows to change it by event (online only)

Performance selection: the dropdown menu allows to choose one performance only, among several ones, or all (always in light of the already defined filters)

Filter rate types: this filters allows to select among the possible different rate types used by the event's performances

Performances: allows to select the list of available dates

d) Quotas

In this screen you set how many season ticket of this kind you intend to sell. This value can be modified ongoing.

Calculated price

SEAT CATEGORY		QUOTA	ALERT THRESHOLD IF AVAIL <=	AVAIL
Without	<button>MODIFY QUOTA</button>	100 000	0	99 813

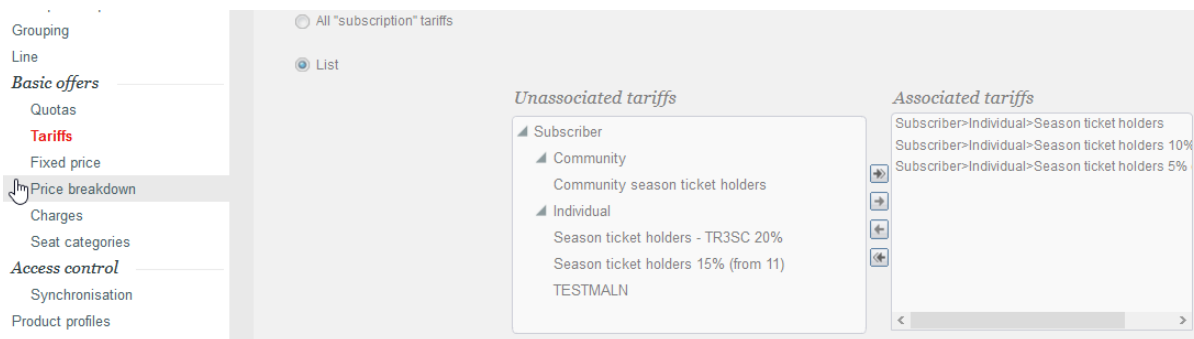

Quota is defined "without" category.

Predefined/Fixed-price and Championship

SEAT CATEGORY		INCLUDED	QUOTA	ALERT THRESHOLD IF AVAIL <=	AVAIL
1	<button>MODIFY QUOTA</button>	Yes	100	0	89
2	<button>MODIFY QUOTA</button>	Yes	100	0	100
3		No			
4		No			
5		No			
6		No			

Quotas must be defined per each seat category for which the season ticket is allowed to be used.

e) Tariffs

In this screen you can select specific subscriber-type tariffs, or consider all the available ones. **NB:** at least one Subscriber Contact Tariff must have been configured first

f) Fixed price (Predefined and Championship only)

		SEAT CATEGORIES (EUR)		
AUD CAT	TARIFF	1	2	3
Contact inside seasonticket	Season ticket holders	80.00	60.00	50.00
	Season ticket holders 5% (from 4)	76.00	67.00	45.00
	Season ticket holders 10% (from 7)	72.00	54.00	45.00

This is a mandatory screen for predefined season tickets: it is required to set the total prices of whole season ticket, by permitted tariffs and seat categories.

g) Seat category

An informative screen that displays all the seat categories selected (with a quota) for any given Site/Space/Logical configuration used by the selected events (Lines)

3.Other important settings

Among the other menus be sure you define, or review, accordingly:

h) Product profile

This is where you associate the set of rules regarding the selling of your season ticket. Among the rules, it will determine tariffs, quantities and sales date ranges for which the product will be available per sales channels.

See: [Organization | Catalog | Product Profile](#)

i) Payment methods

From this menu, you can define payment methods that can be used to purchase this product.

The rule is as follow: it is the intersection of Point of Sales Payment Methods, Product Family Payment Methods (see: [Institution | Initialization | Payment Methods](#)) and Product Payment Methods.

Thus, if you associate no payment methods in this screen, SECUTIX will check for specific Payment Methods set at Product Family level. If none, it means that any Payment methods available on the point of sales will be usable for the product. The payment method you associate at product level must be available at least on the point of sales. Otherwise nothing will happen.

So if you want to have a payment method that is only available for your season tickets for example, you need to associate this payment method to your point of sales AND associate it at product family level.

That way this payment methods will only be available for your season tickets products on your point of sales.

4. Advanced menus

j) Charges

When using Charges (fees that apply per ticket), you can associate one or more of your existing charges tables, by time and sales channel. Either All sales channels or a List you can set up. You can apply different charges table on different sales channels.
 See : Organization | Catalog | Charges tables

Italian Certification | Specific behaviour

Italian clients using a Certified S-360 license can configure presale prices in Price Breakdown menu (point j, below) as described here

k) Custom variables

Custom variables are to be created in Organization | Initialization | Custom Variables.
 Custom variables are element you can display on ticket. They are usually used to display static information that can not be setup elsewhere in SECUTIX.
 They are related to the fields "Free text" (1 to 6) in the ticket editor. See List of variables in the Ticket Editor (auto translated to English)

They can also be used through API and interfaces between SECUTIX and 3rd party system, in order to setup in SECUTIX sets of information that will be pushed and handled by the 3rd party system.

l) Transport stops

This options are for customers selling combined offers including leisure and public transportation. Only for SBB.
 They may define which stations or stops belonging to a public transportation network allow to reach the product associated.

i) Price breakdown

This screen allows to define multiple price components (ticketing, food, parking, promoter...) for prices defined previously.
 Relevant information on the configuration can be found here and here for price breakdown bottom-up.

k) Access control synchronisation

Not used at season ticket level.

5. Validation

The validation step will make sure that you did not forget to set any mandatory information. In such a case, the message displayed will refer to what is missing.

If nothing is missing it will proceed in the actual creation that will become available for Running.

6. Filters and main screen buttons

The screen buttons perform the following actions:

Delete	Validate	Run	Suspend	Cancel	Duplicate	Print test ticket	Export to excel
Delete the chosen Season Ticket (only if in "Preparing" of "Validating" state")	Validate the chosen Season Ticket (only if in "Preparing" and all the mandatory fields are accordingly set). It works as the validation function included on the creation screen (point 5)	Activate the season ticket so it can follow rules set in Product Profile.	Stop (temporarily) the following of the rules set in the linked Product profile(s) for the given season ticket. Used to perform a few changes while on sale	Cancel the season ticket (this does not perform any refund).	Duplicate the selected season ticket	Print a sample ticket.	Export the screen t season ticket as an
