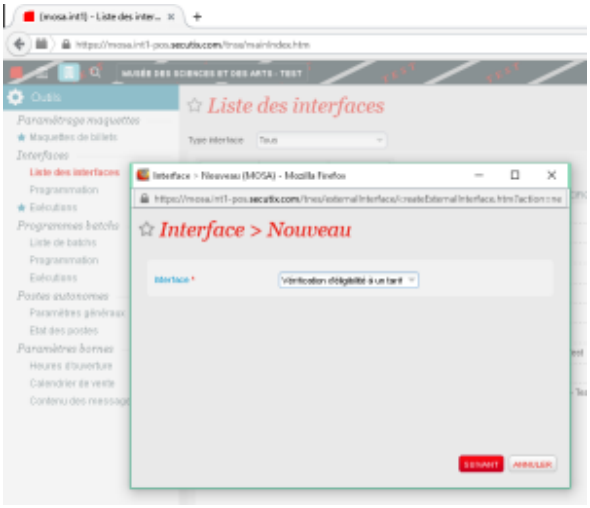
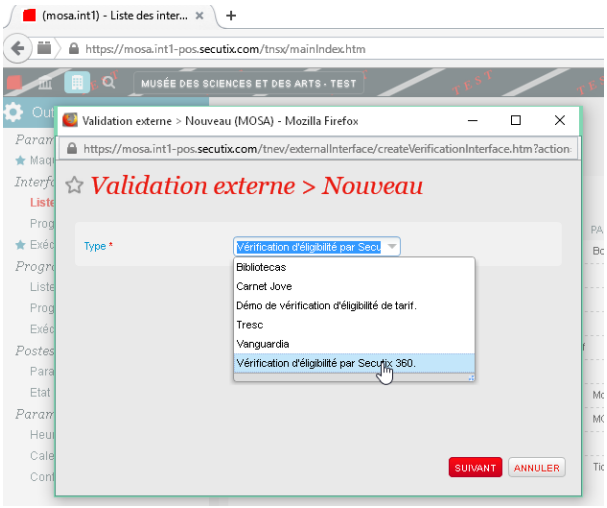
SecuTix inter-institutional price control

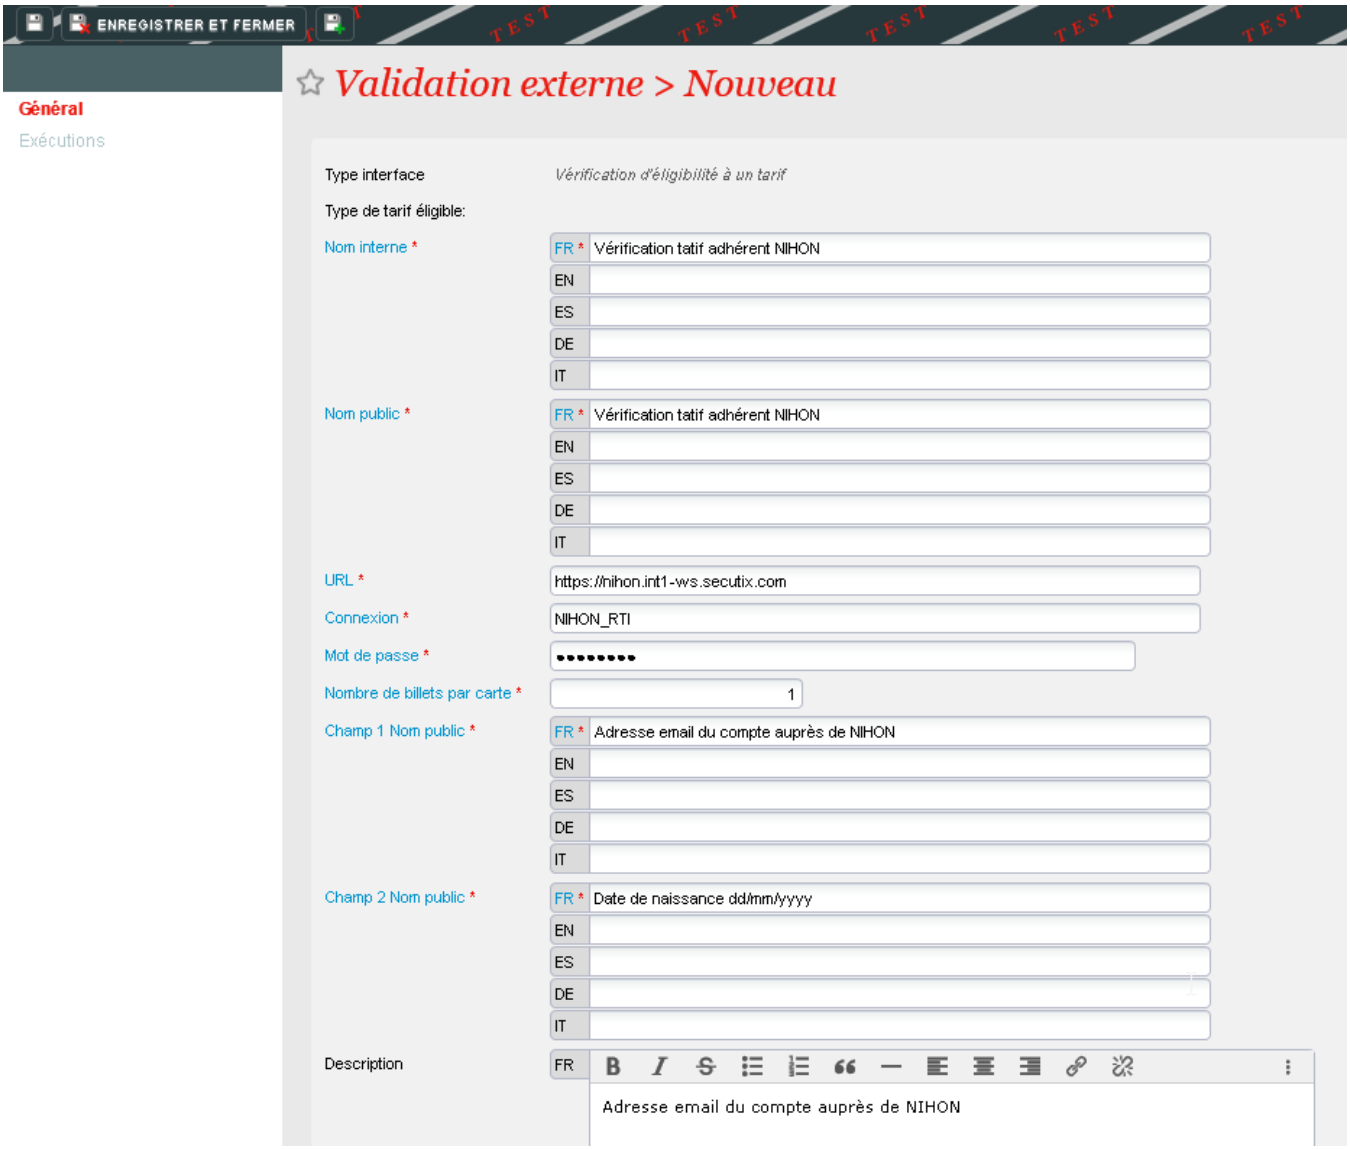
You can now create a price which only applies if the customer is a season ticket holder or member of another institution that uses SecuTix.

- To do this you need to create a "**verification by SecuTix 360°**" type price verification interface



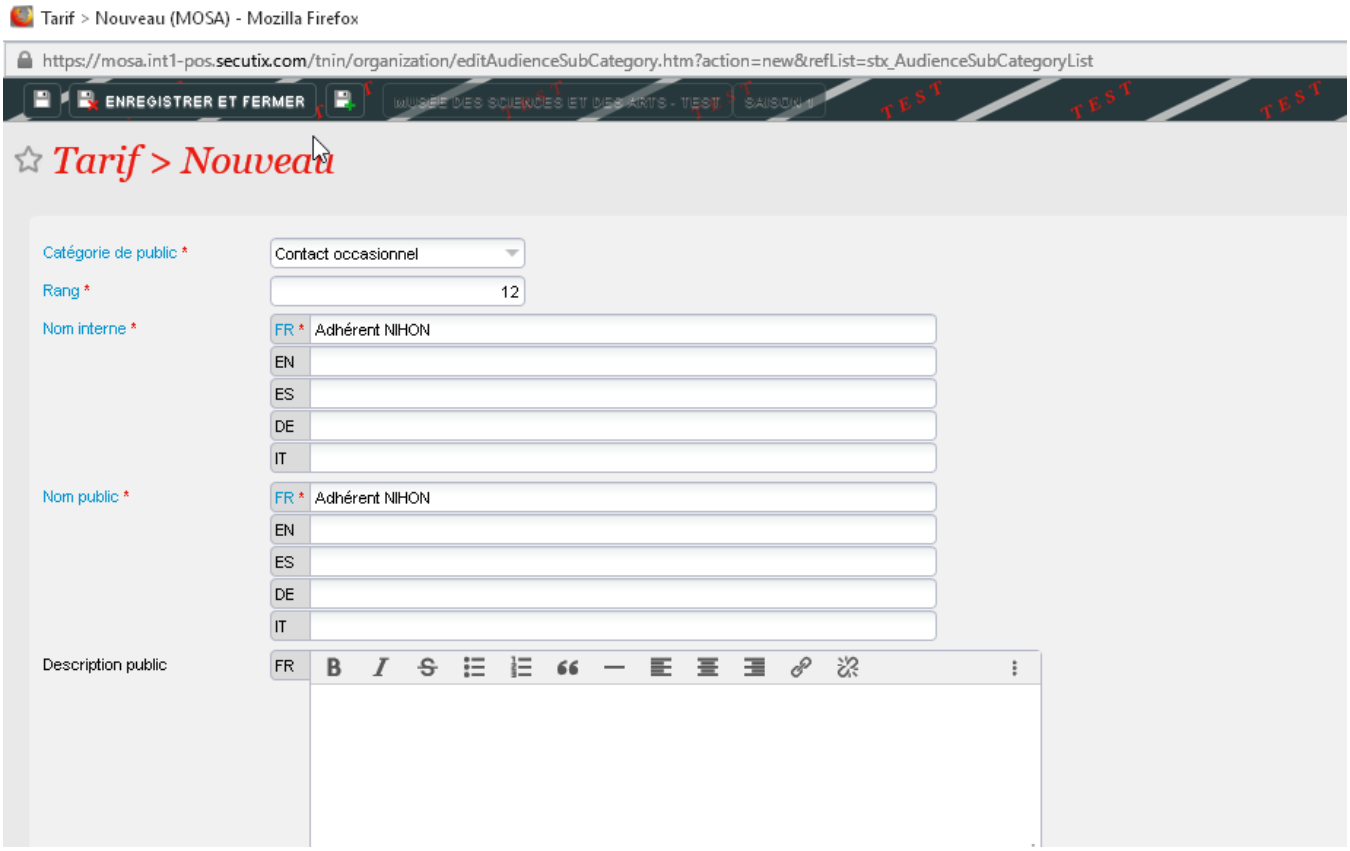


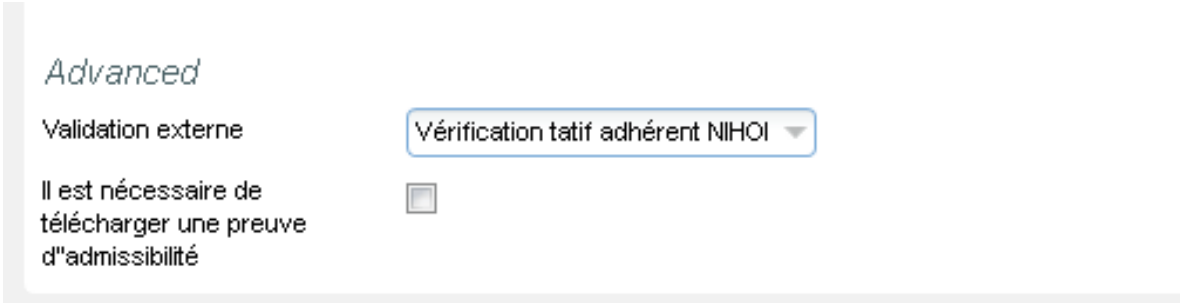
- Make the following settings:
  - Enter the URL of the web services of the remote SecuTix entity. For production, this is https://<institCode>.ws.secutix.com
  - Link the login and password with the internet sales channel of the remote institution
  - Call the first parameter "Email address of account at <name of remote institution>"
  - Call the second parameter "Date of birth" (although it's not really used)

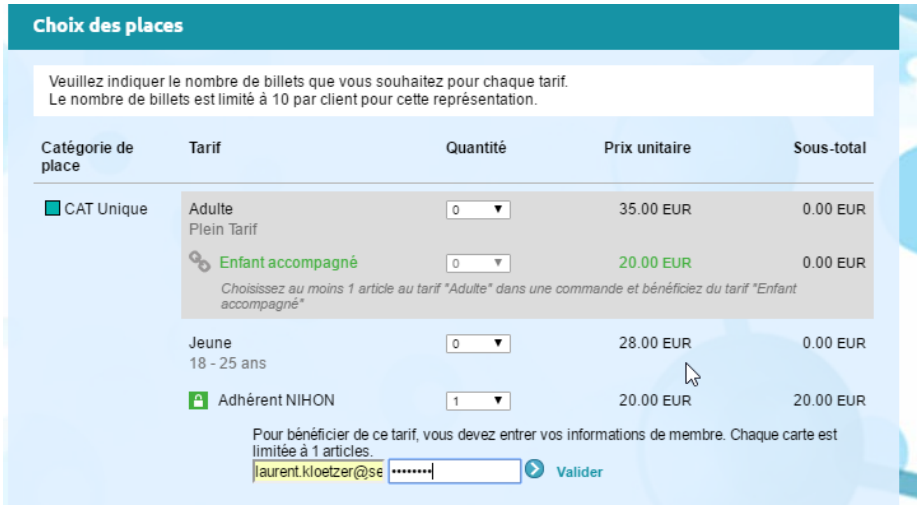


- Here are the two recommended values for the "Filter characteristics" parameter:
  - *mainCategory=MEMBER* to identify a member.
  - *mainCategory=INSIDE_SEASONTICKET* to identify a season ticket holder.

- Finally, create a price associated with this interface.







Once the price is correctly parametrised, it appears in the ticket shop:
