

# Organisation | Access control | Control device & Interface

**Pre-requisite:** [Contrôle d'accès \(FR\)](#), [Access control configuration fields](#),

**Aim:** determine the authorizations given to each device as well as the information displayed. You must make the settings per device.

**Go further :** [Error messages when scanning a ticket in the Access Control](#)

## List of your devices

Do not hesitate to check the version of the "[SECUTIX access control](#)" application and update each device in the Playstore.

Offline invalid barcodes allowed

Elements	Explanation
Helpdesk	support function that allows you to check the validity of a ticket but does not control it (does not "burn" it)
Force entry	Authorize the entry of invalid tickets (when a visitor does not show up on the agreed day for example)
Availability monitoring	Non available anymore
Change CheckFlow	Being able to switch from Entry flow mode to Exit mode and vice versa
Accept invalid barcode	The operator is able to accept the access of invalid barcodes
Add to black list	Must be enabled with Force entry
Pictogram	Image displayed representing a valid ticket, reduced price or invalid ticket
Reduce price	Show the pictogram of the reduce price tickets
Reason	Reason for authorization and refusal of ticket for entry
History	Display the previous scans result of the ticket that you just scan
History sentence	Display the last scan result in one sentence
Barcode	Displays the ticket barcode
Device mode	Displays the scan direction (entry/exit)
Nb of OK check	Shows the number of valid tickets scanned
Inspector	Display the operator assign to that PDA
PDA name	Displays the device number
Battery level	Displays the battery level
Visitor information	Non available any more
Gate - Seat	Displays the gate and seat name
