# How to run the create missing tariffs batch ?

## Setting up tariffs codes

Here, we will enter the mappings between secutix products and Fortress price bands.

1. Go into organisation/tools/List of interfaces and go to "Fortress GB" interface.
2. Click on "mappings" menu.
3. For each tariff, create a AUDIENCE SUB CATEGORY mapping, entering as an external Id the expected price band code.

## Creating events inside Fortress

1. Go into organisation/tools/List of interfaces and go to "Fortress GB" interface.
2. Click on "schedules" menu.
3. Create a schedule of kind "create missing tariffs"
4. Click on "immediate execution". The batch will create the price bands in Fortress using either : the audience sub category mappings already set up above. OR an implicit mapping based on SecuTix tariff's code.
