

Intitution | Tools | Variable Sets

This tool enables you to simulate values when you add fields in your ticket template (in Institution | Tools | Templates).

You can create multiple variable sets. In each set, you can customise values and they will appear accordingly in your ticket template. This enables you to give more explicit and real content when you create your ticket template, instead of seeing technical values.

Reference for variables: [Liste des variables dans l'éditeur de maquettes de billets](#)

The screenshot displays the MatchBoca.THERMAL application interface. On the left, the 'Variable Sets' panel lists various data fields organized into categories: Tools, Template editor, Variable Sets, Hardware Configuration, Paper Formats, Support, and Parameter. The 'TEST' dropdown is highlighted with a red box. The main area shows the configuration for 'textfield_2', where the 'Parameter value' is set to 'Institution_town'. A red arrow points from this value to the 'PAIRS' label in the bottom right corner. The bottom right corner also displays a barcode and a label with the text 'PAIRS', '01.01.2001 00h00', 'Product_externalName', 'Performance hostTeam - Performance opposingTeam', and 'Performance_round'.
