

Intituation | Tools | Variable Sets

This tool enables you to simulate values when you add fields in your ticket template (in Institution | Tools | Templates).

You can create multiple variable sets. In each set, you can customise values and they will appear accordingly in your ticket template. This enables you to give more explicit and real content when you create your ticket template, instead of seeing technical values.

Reference for variables: [Liste des variables dans l'éditeur de maquettes de billets](#)

The screenshot shows the 'Variable Sets' editor interface. On the left, a sidebar lists various tools and sections. The main area displays a table of variable sets, with one row selected and highlighted in red. This row contains the variable name 'institution_town' and its value 'PARIS'. A red arrow points from this row to a detailed view on the right. The detailed view shows the variable 'textfield_2' with its properties and values. The 'Values' section is expanded, showing a radio button selected for 'Parameter value' with the value '\$institution_town'. Another red arrow points from this parameter value field to the 'PARIS' value in the variable list. The bottom right corner of the interface shows a preview of a ticket template with placeholder text '\$xxx_specimenF'.
